T.Andrew Taton Nature 412, 491-492(2 August 2001)

GoHAP™ - Our offer

GoHAP™ NANOHYDROXYAPATITE

NANOMATERIAL FOR FASTER BONE REGENERATION

- SYNTHETIC BONE MINERAL FOR ENHANCEMENT BONE TISSUE REGENERATION.
- THE GoHAP NANOMATERIAL PERFECTLY CORRESPONDS TO NATURAL HYDROXYAPATITE, WHICH IS A COMPONENT OF BONE.
- A NANOMATERIAL IN POWDER FORM WHICH, WHEN COMBINED WITH BLOOD, FORMS A PLASTIC PASTE .
- POSSIBLE APPLICATIONS IN ORTHOPEDICS AND DENTISTRY.
- IT MAY BE USED FOR THE TREATMENT OF COMPLEX BONE FRACTURES OR OTHER SURGICAL TREATMENT OF BONE TRAUMA.
- INNOVATIVE PRODUCT IN THE CERTIFICATION AND IMPLEMENTATION PHASE FOR MEDICAL DEVICES ACCORDING TO EUROPEAN REQUIREMENTS.

Veterinary applications

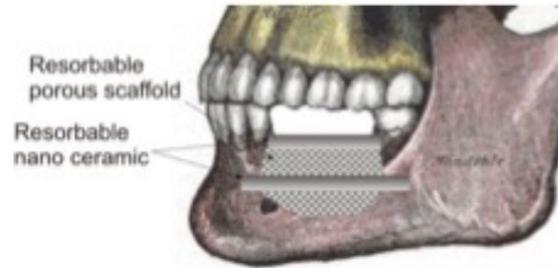

Coating of Implants. with GoHAP™

Laboratory of
Nanostructures

In search for scaffolds enabling healing of large bone gaps

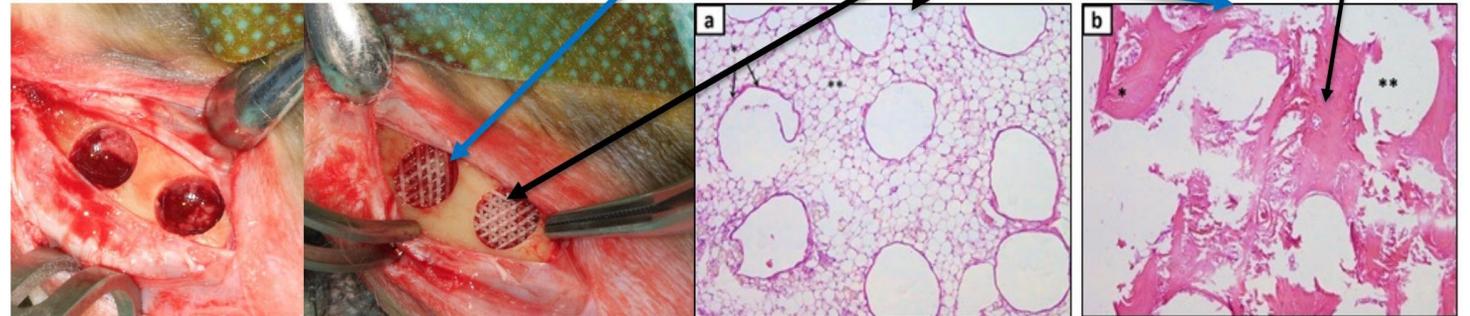

Doctor's and patient's dream:
regrowth of bone after cancer
removal or trauma

Tests on rabbits

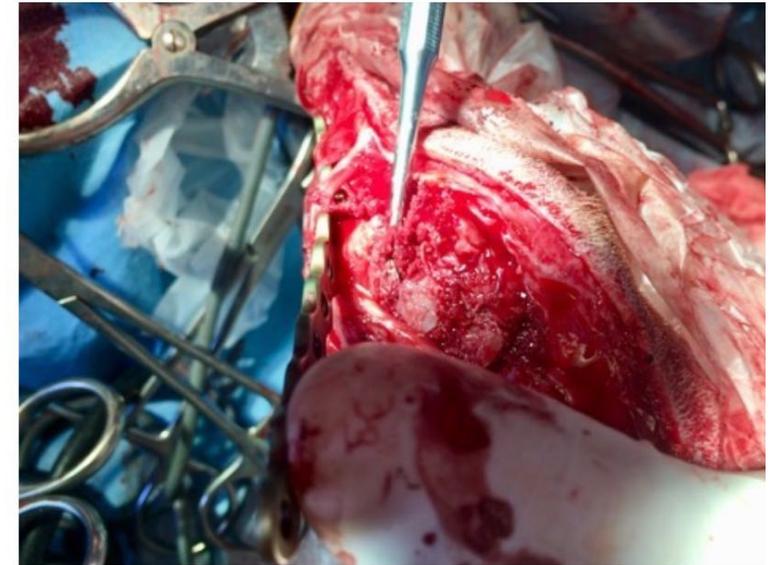

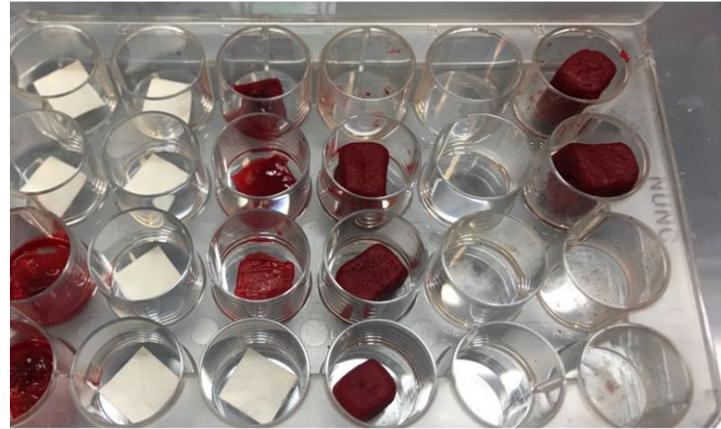

PCL 3d scaffold
HAP sonocoated

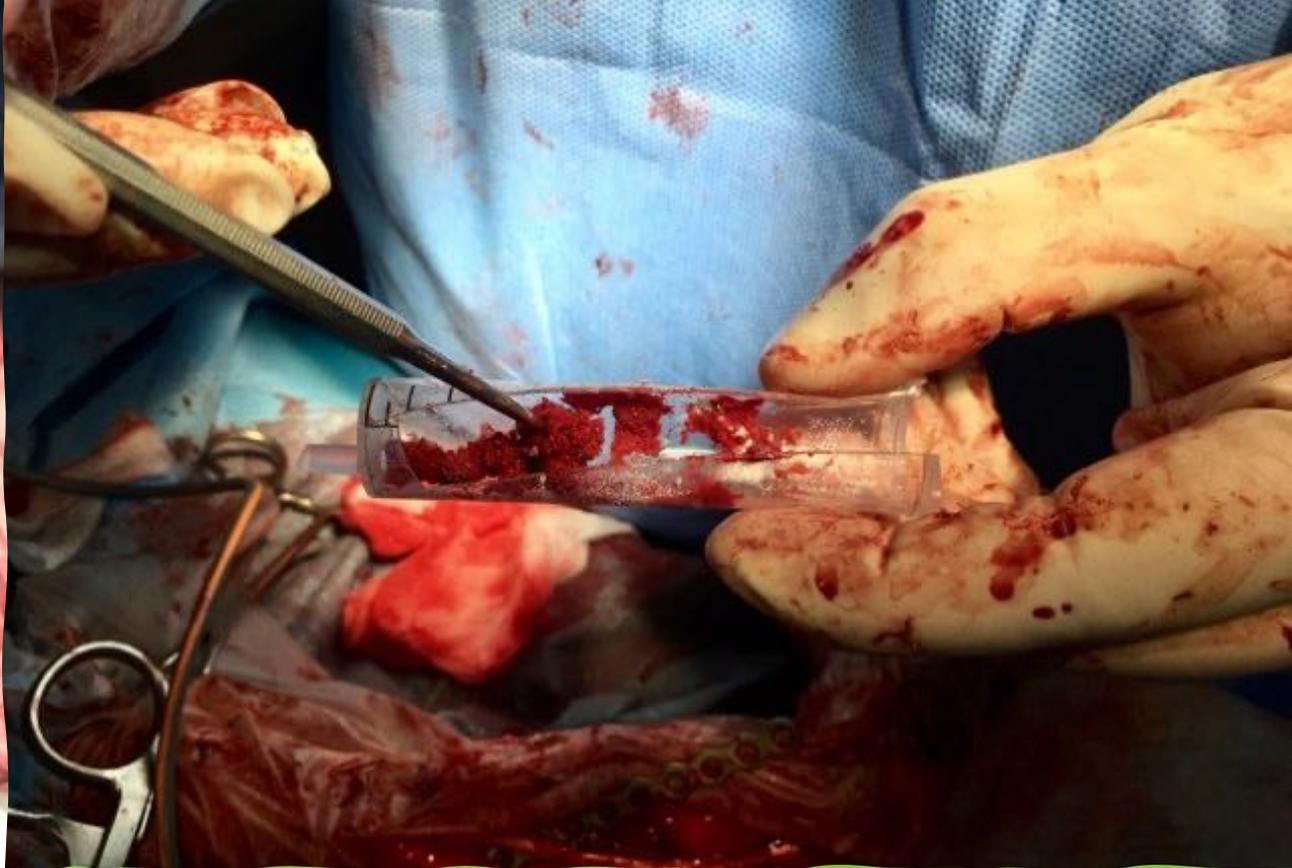

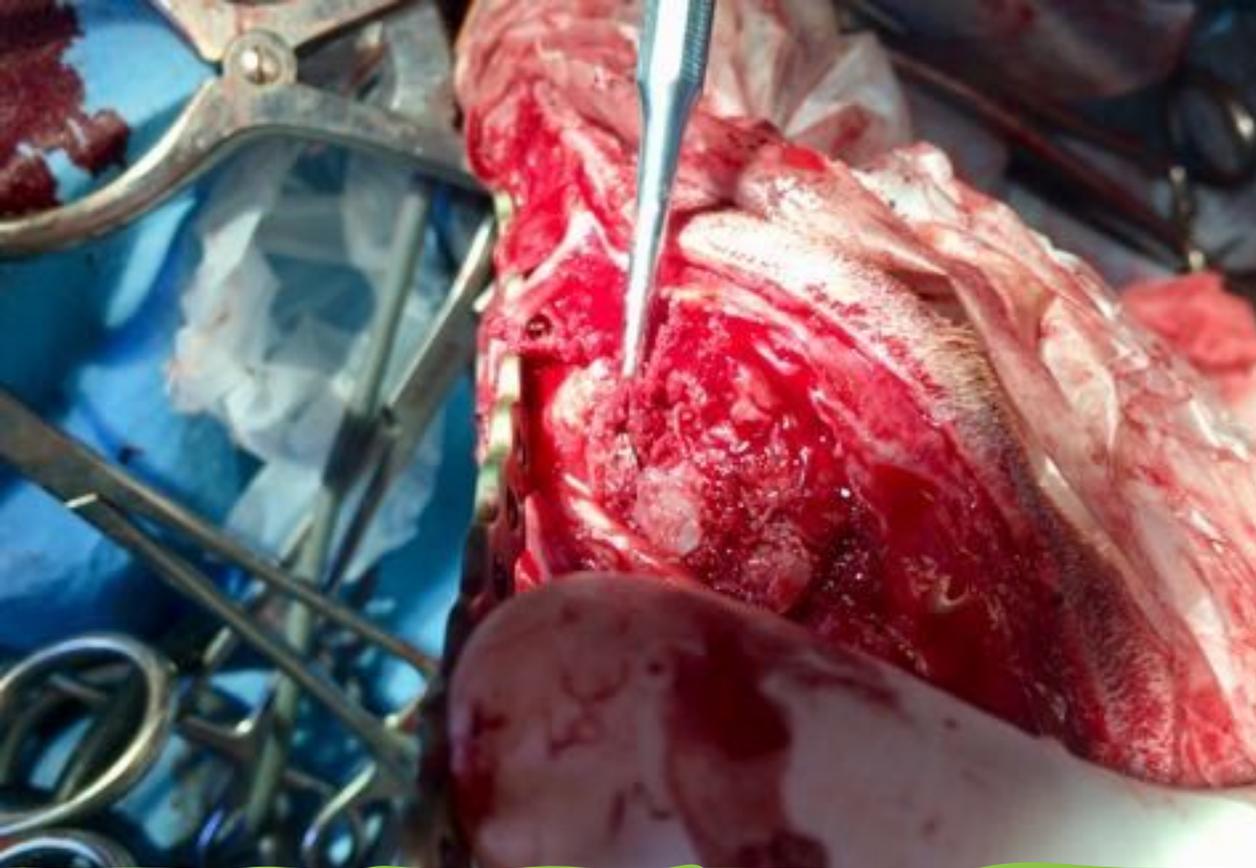

PCL 3d scaffold
no HAP coating

Application as powder mixed with blood or bone marrow

With good bone growth stimulation properties

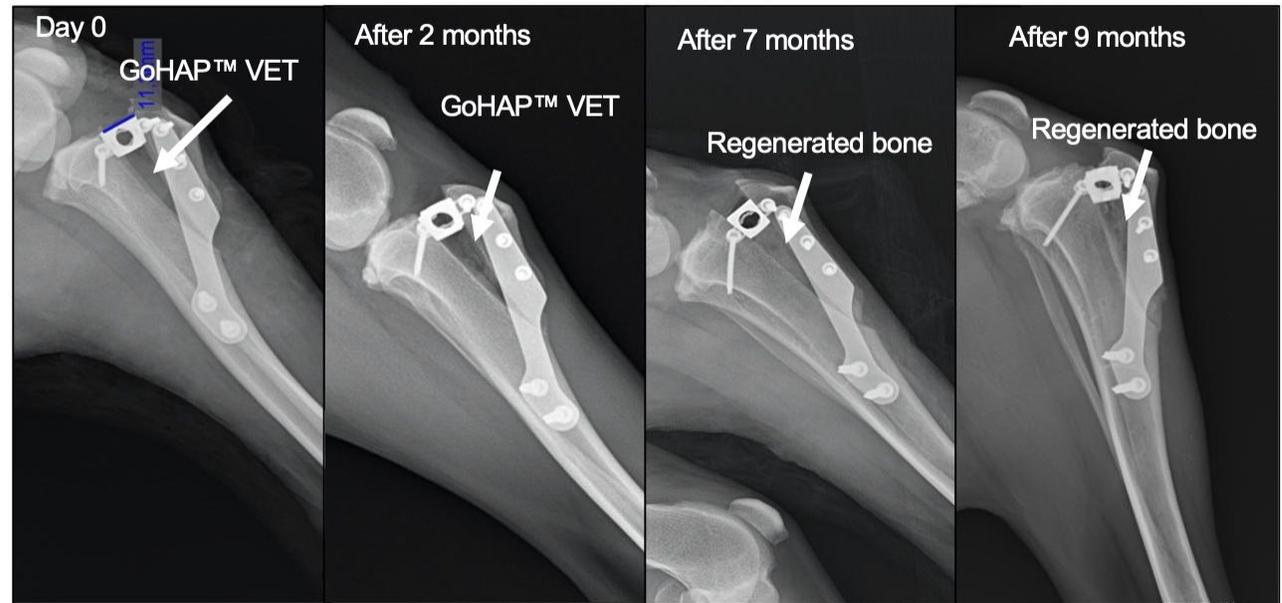

- Mixing of powder with bone marrow

The bone gap is filled with new bone

Many investigations have been done

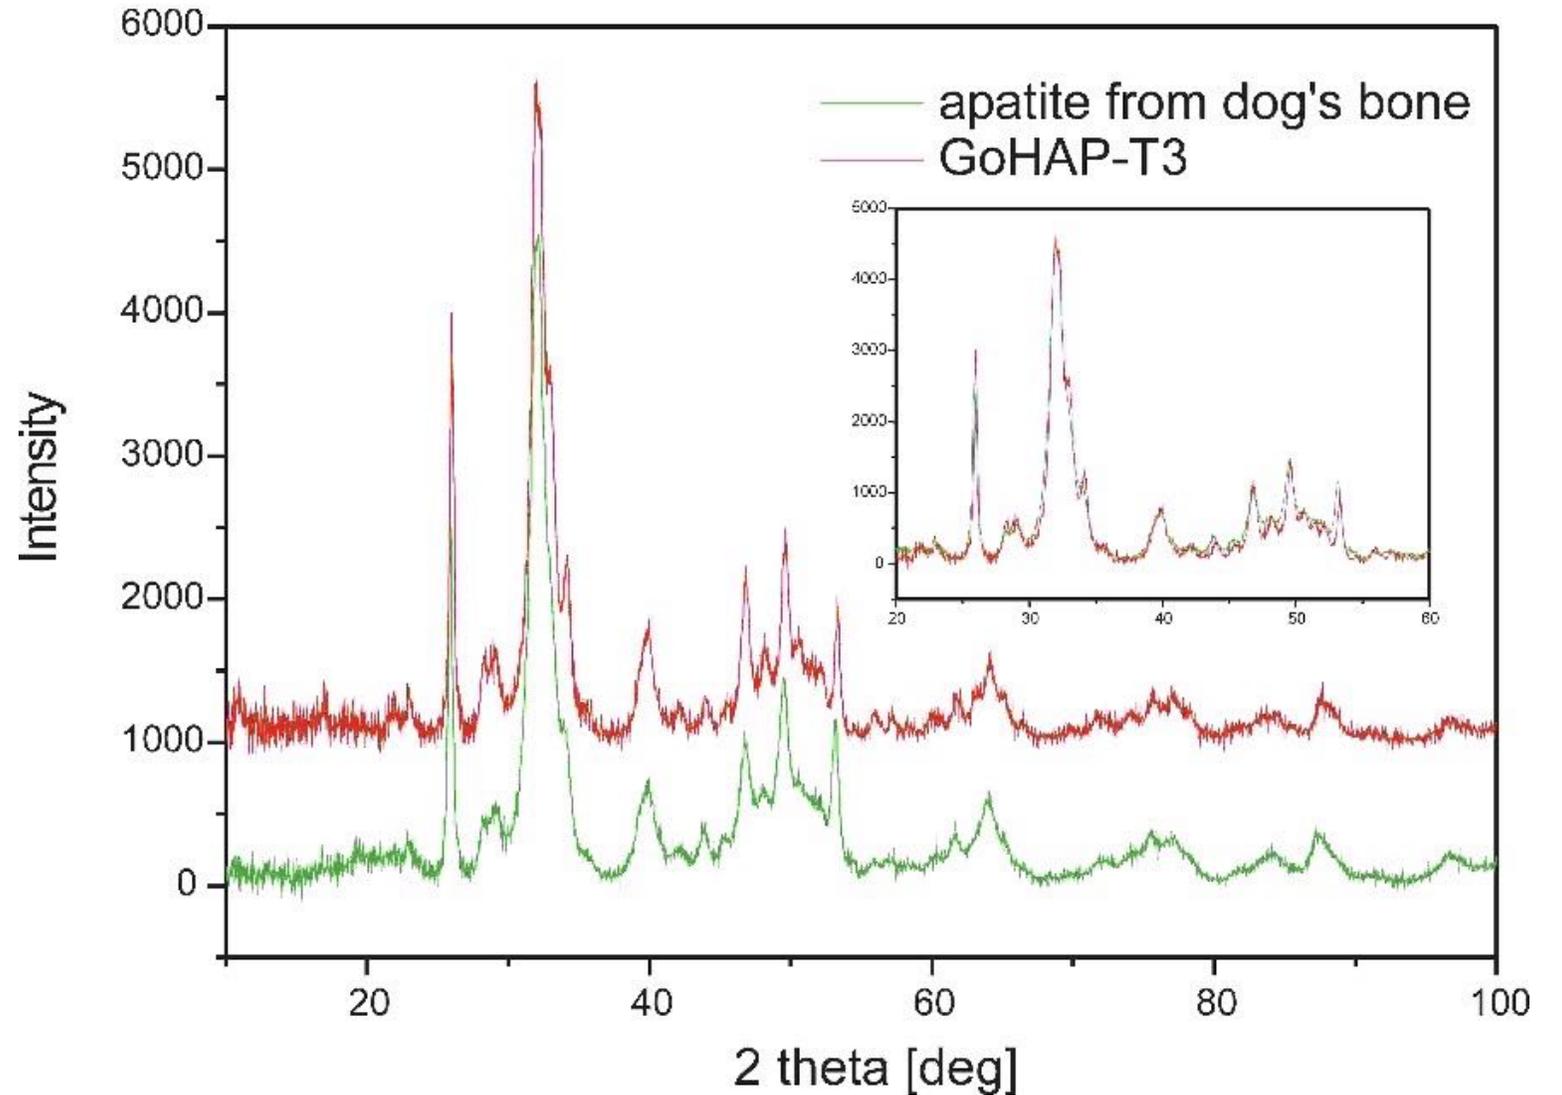

And still much more are needed

- Interactions with cells
- Solubility as a function of specific surface area
- Possibility to absorb antibiotics
- Possibility to absorb BMPs
- Mechanism of action
- Combination with other materials
- Adapted application methods
- Other

First important message

GoHAP™ is a Synthetic hydroxyapatite almost identical to natural one

XRD pattern from dog's bone and GoHAP™- type 3

Second important message:

Unique world-wide offer of nano-HAP with precisely programmed nanocrystals size, and with a high degree of crystallinity

Product images from Transmission Electron Microscopy

Name	Particle size calculated from SSA BET [d±σ,nm]	Specific Surface Area (BET) [a±σ,m ² /g]	Density [ρ±σ,g/cm ³]	Ca/P [Ca/P±σ]
GoHAP Type 1	9 ± 1	225 ± 20	2.82 ± 0.04	1.61 ± 0.04
GoHAP Type 2	13 ± 2	190 ± 18	2.84 ± 0.04	1.61 ± 0.04

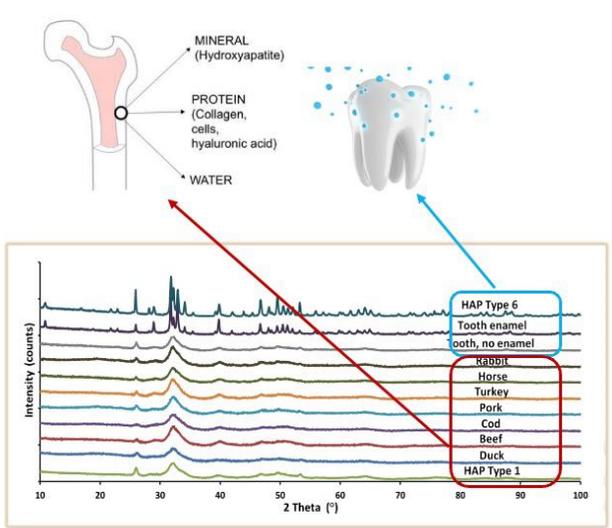

Figure 1 Phase analysis of hydroxyapatite by X-ray diffraction

Safety data sheet GoHAP™

Name: GoHAP™

Main component: Nanohydroxyapatite

Chemical formula: Ca₁₀(PO₄)₆(OH)₂

X-ray diffraction: phase-pure hydroxyapatite

Types available: 1-6

Form: powder or aqueous suspension

Impurities:

Element	% by weight
Mg	< 0,4
Si	< 0,1
Al	< 0,04
Fe	< 0,04
Na	< 0,05
Mn	< 0,01
Pd	0,00
Cd	0,00

Third important message.

GoHAP™ is a ready for use in veterinary as bone growth stimulating material

- There are no side effects of GoHAP application in vivo.
- It is easy to apply, and easily mixes with bone marrow or blood.
- It can be used in cases with inflammation.
- Preliminary results show accelerated bone fixation and regrowth.
- Complicated fractures can be treated.

MIKROFALOWY REAKTOR DO HYDROTHERMALNEJ SYNTEZY NANOPROSZKÓW

W 2011 roku mikrofalowy reaktor do hydrotermalnej syntezy nanoproszków (MSS2) został odznaczony złotym medalem na Międzynarodowych Targach Poznańskich.

Nowa jakość w solvothermalnych reakcjach chemicznych:

- czystość
- elastyczność
- szybkość
- temperatury do 250°C
- ciśnienia do 6 MPa

Wspólne przedsięwzięcie

Laboratorium Nanostruktur
Instytutu Wysokich Ciśnień PAN
i Instytutu Technologii Eksploatacji BIP

CHARAKTERYSTYKA URZĄDZENIA

Mikrofalowy, ciśnieniowy reaktor chemiczny MSS2 służy do przeprowadzania procesów solvo- i hydrotermalnych syntez mikrofalowych, w których uzyskuje się nanoproszki o założonych rozmiarach ziaren i morfologii.

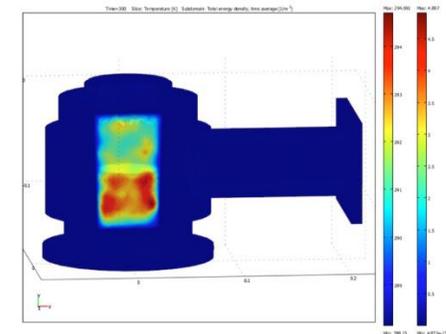

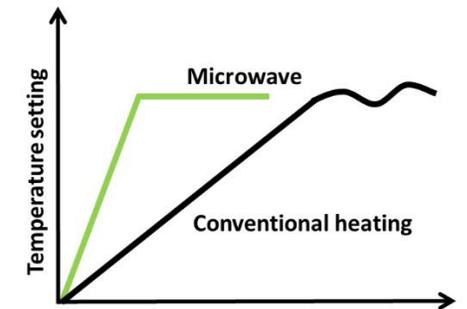

Zastosowane w reaktorze rozwiązania wyprzedzają poziom światowy i pozwalają na uzyskiwanie ultraczystych nanoproszków w skali laboratoryjnej i produkcyjnej. Opracowane specjalizowane wysokotemperaturowe uszczelnienia ciśnieniowe umożliwiają wprowadzanie substratów, prowadzenie procesów oraz odprowadzanie produktów w torach wykonanych z materiałów obojętnych chemicznie.

Uzyskana objętość komory procesowej oraz automatyzacja prowadzenia procesów w trybie pracy stopped flow zapewniają osiągnięcie niespotykanej w innych rozwiązaniach wydajności produkcji nanoproszków.

System sterowania urządzeniem jest zgodny z normą PN-EN 61512 (ANSI/ISA-588.01 Batch Control) i umożliwia m.in.: monitorowanie stanu urządzenia, monitorowanie i zapis parametrów procesów, przeprowadzanie procesów w trybie sterowania ręcznego, półautomatycznego i automatycznego (sterowanie proceduralne).

MSS - 4

- $T_{\max} = 250^{\circ}\text{C}$, $P_{\max} = 6 \text{ MPa}$,
- Teflon vessels volume 0,3 l
- Heating rate up to 1,8 K/s
- Process duration is controlled with high accuracy
- High power density delivered in the reagents: approximately 10 W/ml
- Developed in collaboration with Lukaszewicz – Institute of Sustainable Technologies

Postprocessing plot of total energy density [J/m^3] in model and temperature [K] inside the cup
